## mission e vision

**Over the years, we have been developing our own philosophy, which is the milestone of our activity and which identifies our beliefs as well as our aims.**

Trust and respect are the values on which all professional and human experiences are based. Our daily activity is built on the exchange of such ethical and professional values.

Team work in our Company is crucially rooted in people, whose work and ideas represent the main secret of our experience.

Thanks to their cooperation we are building our own future day by day.

We are developing our activity as a source of satisfaction for all the people involved: our staff, cooperators, customers, suppliers.

We identify and find our ethical behaviour in every single daily action, in full compliance with human relationships as well as social and Environmental responsibility.

We constantly dedicate all the necessary care, attention and assistance to our cooperators, weaving a well organised atmosphere and developing the growth of our own future.

We want to be a trustworthy partner, a partner you can rely on.

**These values identify our aims, commitment and behaviour since our beginnings: they represent our mission.**

# Since 1926 our tradition as a value

**Almost a century of tradition, story and experience is recognisable in a solid brand of quality and innovation, which makes Ravioli a specialist and responsible company, in terms of reliability and professional competence.**

In 2016 Ravioli celebrated its 90th anniversary, one of the many considerable goals the company has achieved in almost a century of activity. Since its foundation back in 1926, Ravioli has always combined a peculiar attention to market's requirements to a constant technical development, focusing its manufacturing activity especially on two main fields: industrial lifting and, starting from the 80s, electrical traction. As a result of this synergy, during the years the company achieved a high-level standard quality, a solid experience and a reliable specific knowledge, which allowed Ravioli to extend its horizons and spread its name internationally.

In the 60s the company moved to its present headquarter in Milan, turning into S.p.A. and continued to concentrate on a full in-house made-in-Italy manufacturing.

In 2007 Ravioli received the renowned "Milano Produttiva" Award for its productivity by the Chamber of Commerce, a significant goal remarking its valuable work and activity. Dealing with a high competitive and various market, demanding a technological advanced production, Ravioli has always accepted many different challenges, also in line with the "Code of Ethical Behaviour" the company issued in 2009.

# Into the future innovation and sustainable development

**Long-standing experience, qualified and specialised experts, high-quality standards, enduring partnership with clients.**

These are the main results Ravioli has achieved through the years. The constant ambition towards production processes improvement, updated technologies and use of innovative materials has always encouraged our staff to aim for professional and personal growth, which allow the company to be a well-organised and reliable supplier.

Flexibility and continuous search for innovation are in line with our sense of ethic responsibility and Environmental sustainability. The competent combination of technology and socio-ecological culture represents a significant challenge our company always focuses on.

In accordance to SA8000, in 2009 Ravioli issued its “Code of Ethical Behaviour”, expressing its strong sensitivity towards social surroundings. Our commitment towards the spreading of sustainable and renewable energies is embodied in our programme **Green e-motion**, a project providing the manufacturing of products specifically dedicated to the Environmental development of alternative energies.

# Forever quality and excellence

**Since its foundation, the company devoted a particular attention to product and service quality and excellence. Through Quality Certification and compliance with Safety Directives Ravioli is recognised as a reliable partner in the international market background.**

The Quality System Certificate ISO 9001, achieved in 1996, offers an important opportunity of constant renewal and modernisation. The quality of our work is steadily a top priority, ensuring the ongoing professional growth for all the people involved.

In 2005 the rating Agency Standard and Poor's, through its Observatory on credit performance of Italian small and medium enterprises, identifies Ravioli among the first three Italian more solid Companies in the category of an annual turnover up to 30 millions Euros.

In 2007 Ravioli receives the “Milano Produttiva” Award by the Chamber of Commerce, the renowned “Ambrogino d’Oro” and, a few years later in 2013, it is mentioned among the Historical Milanese Companies.

Ravioli is also involved in an event during Expo Milano 2015, which gives the company the possibility to deliver a speech regarding “The relevance of renewable wind energy” to an international audience.

**The integration of quality and innovation represents the sense of our everyday challenge, confirming our reliability as a professional response to the increasingly demanding, innovating market.**

# Working with **safety and reliability**

**In compliance with our Quality System, products safety and reliability always play a significant role in our activity.**

Thanks to our close cooperation with our clients, we are able to project and manufacture the most suitable products for any specific requirement, updating our production according to the normative evolution.

In our in-house laboratories, materials, new applications and international Norms are constantly examined and thoroughly analysed by our engineers and technicians, who also carry out particular tests specifically requested by our customers.

For several years now, we have also been actively cooperating with some important test institutes and well-known laboratories, which assist us in keeping up-to-date our production according to the most updated Directives.

Such partnerships allowed Ravioli to achieve some important internationally acknowledged Certifications, like UL, DENAN, ATEX for specific range of products.

**The result of this constant and careful work of research and development is tangibly represented by the safety and reliability of our products, which satisfy the needs and requirements of each customer.**

# Ravioli product range

## Rotary limit switches

Precise and safe, our rotary limit switches are used to control the movement of several industrial machineries. Particularly compact and available in different revolution ratios, they can be equipped with sensors and other various integrating accessories, which make them suitable for applications in different fields, from lifting and building machinery to wind power and solar tracks.

## Radio remote controls

Ergonomically shaped and comfortable, our radio remote controls are used in cranes, hoists and other industrial lifting plants. Whereas the transmitter is available either with push-buttons or joysticks, the receiver can be realised for outdoor and indoor applications on DIN rails.

Our radio remote controls can be equipped with several optional accessories and advanced functions, like data-feedback, take-release and master-slave.

## Pendant stations

Resistant to shocks and atmospheric agents, our pendant stations are used in cranes, hoists and other industrial machineries, and they are available in different sizes according to requirements and needs. Thanks to a versatile assembly, special labels, international symbols and other options, each model can be easily customised upon request.

## Slip rings

Slip rings assure electrical connection between a fixed and a mobile part through a rotary motion. Our range is large and vastly versatile to meet various requirements in different applications. Safe and reliable, our slip rings can be equipped with some optional accessories, like air passages and assorted kinds of sensors, as well as other treatments, such as silvered or golden rings and brushes suitable for signal transmission.

## D.C. Contactors

Characterised by small dimensions and great loads, our D.C. contactors and motor reversers are used for lift trucks, industrial cleaning machines, aerial platforms and other electrical vehicles.

The power ranges from 100 A up to 360 A, whereas different options can customise the products, like blow-out, protection against dust and auxiliary contacts. Brackets can be also supplied for assembly.

## Twin connectors

Assuring electrical connection between motors, batteries and battery chargers, our twin connectors are suitable for forklifts, sweepers, scrubbers, golf cars and other electrical vehicles. In accordance with the current European DIN Norms, our range consists in the models with 80 A, 160 A and 320 A, all available also in acid-proof and shock resistant materials.

# Customised solutions

## Ravioli project

**Thanks to the effective mutual cooperation with our customers, we are able to provide a wide range of options and numerous customised versions to satisfy their requirements.**

As a result of our versatility towards our customers's needs, we have been developing Ravioli Project through the years: our specific corporate system according to which we directly listen to our clients's requests and consequently project and manufacture customised products to fulfil them.

Our team is available to project and realise customised tools and assembling systems, in compliance with the present Norms, and totally supporting any potential technical development in the future.

Not only represents this procedure for us a continuous increase of our quality and a constant technological evolution, but it also denotes a considerable updating of our productive flexibility and versatility.
